

DR CONSULTING

Fractional Enterprise Architecture & Security

High-level strategic leadership and systemic security on-demand.

"We don't just build systems;
we ensure they are secure, compliant, and resilient."

Growth Without Governance Is a Security Risk

Most enterprises scale faster than their architecture — leaving technical debt and security gaps.

Technical Debt Accumulation

1

Every shortcut taken today becomes a costly refactoring project tomorrow. Without architectural governance, systems become unmaintainable and fragile.

Security Vulnerabilities by Default

2

OT/IT integration without zero-trust and deny-by-default principles creates attack surfaces. Security added after the fact is always more expensive — and less effective.

No Strategic Technology Alignment

3

Vendors, tools, and projects are adopted without coherent long-term oversight, leading to incompatible stacks and wasted capital investment.

Governance, Security & Strategic Alignment — On Demand

01

Architecture Review & Governance

Periodic audits and alignment of your technical stack with business goals. Misalignments, bottlenecks, and risks identified before they become critical.

02

Cybersecurity Framework Design

Zero-trust and Deny-by-Default principles, and ISO Security Compliance embedded from Day 1 — into every architectural decision and system integration.

03

Fractional Technical Leadership

C-level architectural strategy without a full-time hire. Vendor Technical Steering and advocacy during multi-vendor negotiations — on your terms.

Architecture as a Competitive Advantage

1 Expert Advocacy

Your internal technical authority during negotiations — protecting against vendor lock-in and subpar integrations.

2 Compliance by Design

Security architected from the ground up per ISO standards — not bolted on as an afterthought.

3 Predictable Governance

Regular audits and design reviews provide a constant "health check" on your digital assets and security posture.

WHAT YOU RECEIVE

Reference Architecture

Documented target-state design for your enterprise ecosystem.

Solution Architecture

Specific designs for new projects aligned to your Reference Arch.

Monthly Compliance Audit

ISO security review with findings and remediation guidance.

Technical Design Review

Evaluation of all new tech proposals before adoption.

Vendor Assessment Reports

Pricing: Monthly Retainer
